## SUMMARY

This report summarizes a test run of the test "Customer-delete-soak-API". It was performed on April 1, 2024 and is considered to have failed.

The test was configured to run up to **100 VUs** for 40 minutes 30 seconds. A total of **209 168 requests** were made with a max throughput of **106 reqs/s**. The sections below give a more detailed breakdown.

## PERFORMANCE OVERVIEW

The 95th percentile response time of the system being tested was **67 ms** and **209 168 requests** were made at an average request rate of **87 requests per second**.

## TEST OVERVIEW

### CHECKS

The test had **1** different checks that were evaluated a total of **209 168** times, of which **209 166** failed. Overall the success rate was **0%**.

CHECK NAME	SUCCESS RATE	SUCCESS COUNT	FAIL COUNT
Status is 200	0%	2	209166

### THRESHOLDS

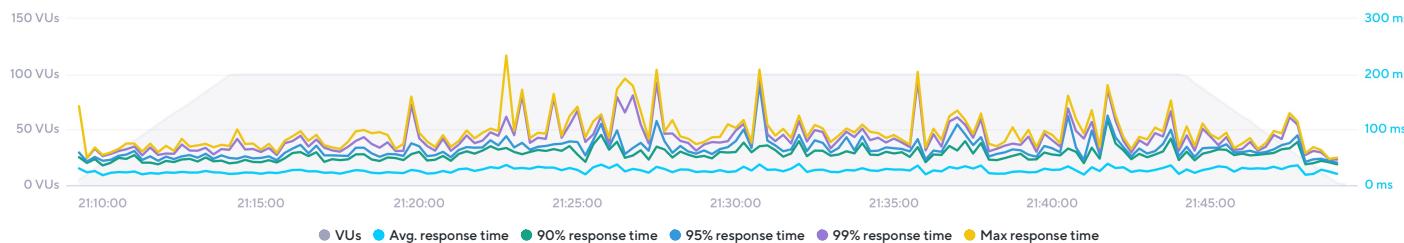

The test failed to meet its performance expectations, with 4 out of 14 thresholds exceeding their acceptance criteria.

## RESPONSE TIME

The maximum response time was **233 ms** at **100 VUs**. The average response time at the same point in time was **36 ms**, with 95% of requests taking less than **88 ms**.

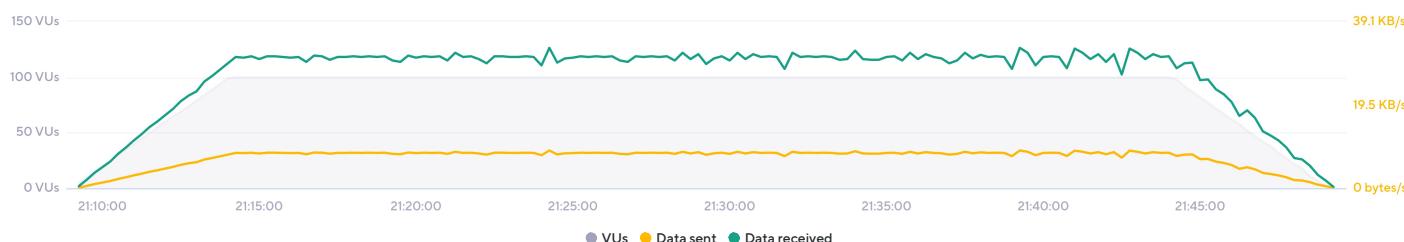

## THROUGHPUT

The test had an overall average request rate of **87 reqs/s** peaking at **106 reqs/s** while running **100 VUs**.

## BANDWIDTH

The amount of data sent peaked at **100 VUs**, sending **8.85 KB/s** of data. Data received had its peak at **100 VUs** with **32.9 KB/s** being received.

## SLOWEST REQUESTS

There were requests to **10** unique URLs, with **209 168** different responses received. The slowest response had an average response time of **142 ms**.

# VOCABULARY

## VUs

A Virtual User is a simulation of a real user making requests to the system. Multiple VUs are executed concurrently to simulate traffic to the website or API.

## Throughput

The amount of transactions the system under test can process, showing the capacity of the website or application.

## Checks

A check is an assertion that the system under test behaves correctly, e.g. that it returns the correct status code. They do not halt the execution of the test, but acts as a pass/fail metric.

## Response Time

The time from sending the request, processing it on the server side, to the time the client received the first byte.

## Latency

The time that data sent or received spends on the wire, i.e. from the start of data being transmitted until all the data has been sent.

## Thresholds

Thresholds are a pass/fail criteria used to specify the performance expectations of the system under test.
