SUMMARY

This report summarizes a test run of the test "Course-EDIT-Stress-API". It was performed on March 31, 2024 and is considered to be successful.

The test was configured to run up to **100 VUs** for 14 minutes 30 seconds. A total of **29 590 requests** were made with a max throughput of **105 reqs/s**. The sections below give a more detailed breakdown.

PERFORMANCE OVERVIEW

The 95th percentile response time of the system being tested was **72 ms** and **29 590 requests** were made at an average request rate of **35 requests per second**.

TEST OVERVIEW

CHECKS

The test had **1** different checks that were evaluated a total of **29 590** times, none of which failed.

CHECK NAME	SUCCESS RATE	SUCCESS COUNT	FAIL COUNT
Status is 201	100%	29590	0

THRESHOLDS

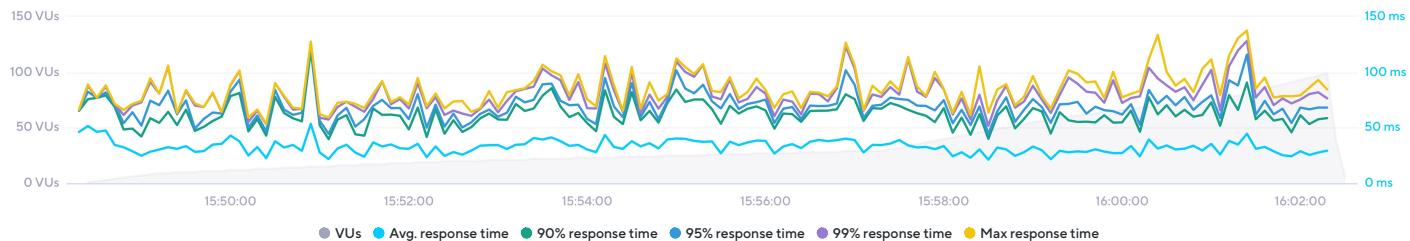

The run met all of its performance expectations, with none of the defined thresholds having been exceeded.

RESPONSE TIME

The maximum response time was **137 ms** at **81 VUs**. The average response time at the same point in time was **45 ms**, with 95% of requests taking less than **116 ms**.

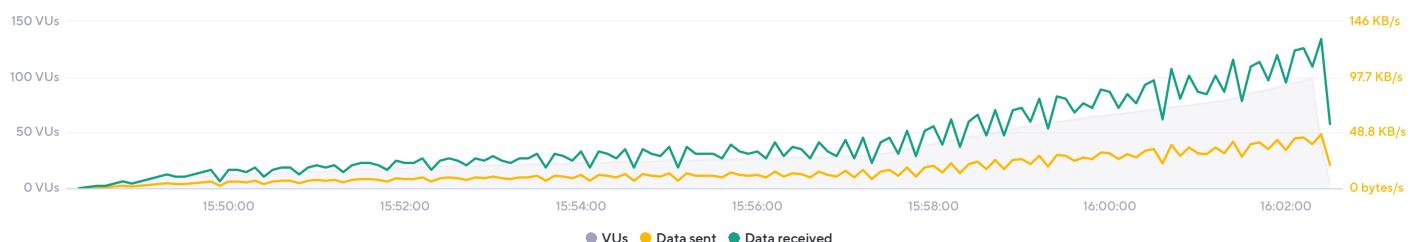

THROUGHPUT

The test had an overall average request rate of **35 reqs/s** peaking at **105 reqs/s** while running **97 VUs**.

BANDWIDTH

The amount of data sent peaked at **39 VUs**, sending **47.5 KB/s** of data. Data received had its peak at **39 VUs** with **131 KB/s** being received.

SLOWEST REQUESTS

There were requests to **7** unique URLs, with **29 590** different responses received. The slowest response had an average response time of **42 ms**.

VOCABULARY

VUs

A Virtual User is a simulation of a real user making requests to the system. Multiple VUs are executed concurrently to simulate traffic to the website or API.

Throughput

The amount of transactions the system under test can process, showing the capacity of the website or application.

Checks

A check is an assertion that the system under test behaves correctly, e.g. that it returns the correct status code. They do not halt the execution of the test, but acts as a pass/fail metric.

Response Time

The time from sending the request, processing it on the server side, to the time the client received the first byte.

Latency

The time that data sent or received spends on the wire, i.e. from the start of data being transmitted until all the data has been sent.

Thresholds

Thresholds are a pass/fail criteria used to specify the performance expectations of the system under test.
